

Harol PR Series Foldaway Awning

PRODUCT
INFORMATION

Superb awning Ideal for large commercial and domestic installations

3 models:

PR 230 Encased awning

PR 220 Awning with integral cover board

PR 210 Open Awning

Technically advanced awning based on the square bar system, giving strength and rigidity and consequently allowing the possibility of large maximum sizing.

Operation can be either by using a detachable crank handle locating on a gearbox eye or electrically operated.

Electrically operated awnings utilise a tubular motor located in the awning roller. Advances in electrical control now mean that the only wiring required is to the awning motor in the roller tube.

The blind can then be operated by a remote control unit or a stand alone wall switch that requires no wiring.

Electrically operated awnings can be provided with sun & wind sensors which control the blind automatically depending on the light intensity and wind speed.

Variovalance

PR Series Awnings can be supplied with a variovalance. This is an additional valance (concealed behind the standard valance), which can be operated with a crank handle to drop down by up to 1.5 Metres, giving protection against low sun.

Heating and Lighting

When electrically operated these awnings can incorporate a Storelight unit. This can be for lights or lights plus heating all operated from the remote control unit.
